## **WITHDRAWAL OF IGC-APPROVAL**

**Recorder Name: EW Avionics EWFR Models A-D**

**Level of Approval: IGC-approval was withdrawn from this type of Flight Recorder on 1 October 2012 due to factors affecting the security of the FR and its IGC flight data files**

- [REDACTED]
1. This document updates the GFAC Chairman's email address and the web site data in para 4 below.
  2. In 2011 and 2012, security breaches were detected with some types of IGC-approved FRs, leading to IGC files being produced with some false data that continued to pass the IGC electronic Validation check.
    - 2.1. The IGC ANDS and GFA Committees analysed the overall security situation and produced the paper referenced above that was approved by the 2012 IGC Plenary meeting. This recommended that some older types of FR were no longer secure enough to retain IGC-approval, and others should have their IGC-approval level reduced. The action date for the changes was 1 October 2012.
  3. EWFR Models A-D. The paper recommended that IGC-approval be withdrawn for the following reasons. The GPS receiver is a separate unit from the FR unit itself, the type and characteristics of the GPS receiver are not fixed, and the resulting IGC flight data files contain data not compliant with the IGC FR Specification document.
  4. Current web sites. References for the latest versions of documents relating to IGC-approval of FRs are given in para 2 on page 1 of the main table that lists all IGC-approvals. The latest version of the table is available through [www.fai.org/igc-documents](http://www.fai.org/igc-documents) and the GFAC Chairman's web site [www.ukiws.uk/GFAC](http://www.ukiws.uk/GFAC). The detailed references are placed in the main FR table rather than in each IGC-approval document, so that if the reference changes, only the main table has to be updated rather than all IGC-approval documents.
